

## [02] Implicit conversion automatically converts one type to another; explicit conversion “forces” one type to another

### Implicit conversion

- Implicit conversions may be unwanted

Input	Output	Data Type
00489	489	Number
true	TRUE	Logical
B4921	B4921	Text
=NA()	#N/A	Error

### Explicit conversion

- Control the data type with explicit conversion

Input	Output	Data Type
=“Aug 2023”*1	45139	Text to Number
=FALSE*1	0	Logical to Number
=“B4921A”*1	#VALUE!	Text to Error
=NA()*1	#N/A	Error to Error
=TEXT(1000, “#,000.00”)	1,000.00	Number to Text
